PROFESSIONAL SUMMARY

Strategic, business-aligned Staff Software Engineer and AI Engineer with 20 years of professional expertise designing, modernizing, and scaling high-throughput distributed backend architectures across 20+ production codebases for US and LATAM markets.

Proven track record in Fintech, E-Commerce, and enterprise SaaS environments, leading technical squads of 4-5 backend engineers and authoring over 40+ RFCs, ADRs, and engineering operating model charters to simplify complex, revenue-critical platforms handling 10,000+ transactions per hour.

Pioneer in operationalizing agentic AI infrastructure and AI-augmented development workflows (Codex, GitHub/Atlassian MCP) into enterprise production environments, specializing in Model Context Protocol (MCP) server design and high-fidelity empirical evaluation loops. Expert cross-functional collaborator adept at bridging deep technical execution with Sales, Product Management, and Finance strategies.

CORE EXPERTISE & SKILLS

Category	Technologies, Patterns & Community Achievements
Backend & Languages	Ruby, Go, Python, JavaScript, SQL, Ruby on Rails, Sidekiq, Redis, Intelligent Caching
AI Engineering & Tools	Model Context Protocol (MCP) Server Design, LangGraph, LLM APIs, Isolated Sandboxing, High-Fidelity Benchmarking, Codex, GitHub MCP, Atlassian MCP, Claude Code, Cursor, Aider

Category	Technologies, Patterns & Community Achievements
Architecture & Patterns	Domain-Driven Design (DDD), Service-Oriented Architecture (SOA), Test-Driven Development (TDD), Distributed Workflows, Transactional State Machines, Clean Architecture, Service Objects
Infrastructure & Cloud	AWS, Docker, CircleCI, Heroku, MySQL, PostgreSQL, OpenSearch, Databricks, ThoughtSpot
GitHub Community	88+ Public Repositories Achievements: Pull Shark x3, Pair Extraordinaire x2

OPEN SOURCE INNOVATIONS

[ruby-skill-bench](#) | *Author & Maintainer*

- Designed and engineered a high-fidelity, empirical evaluation framework to rigorously benchmark AI agent skills, shifting assessment from subjective observation to quantifiable metrics.
- Architected secure, isolated Git-based sandboxes ensuring 100% execution reproducibility for agent evaluation loops.
- Implemented multi-dimensional LLM blind judging covering Correctness, Quality, and Test Coverage to actively eliminate regressions in production agentic workflows.

[rails-ai-bridge](#) | *Author & Maintainer (1,600+ downloads on RubyGems)*

- Designed a zero-configuration MCP server exposing structured Rails application context (schemas, routes, models, jobs, auth, config) across 9 read-only system tools, maximizing AI agent response speeds by up to 40% with no server required.
- Reduces token overhead by ~15% via smart introspection presets while heavily increasing response precision and structural context accuracy.
- Automated team-wide developer onboarding by dynamically generating assistant-specific operational configurations.

[rails-agent-skills](#) | *Author & Maintainer*

- Compiled and encoded decades of battle-tested Ruby on Rails production best practices into a modular library of structured AI skills, enforcing TDD discipline, DDD architecture boundaries, workflow chaining, and strict hard-gates. Compatible with Cursor, Claude Code, and Aider.

PROFESSIONAL EXPERIENCE

Dealerware | Software Technical Lead (May 2022 – April 2026) | Remote

- Directed a backend engineering squad of 4-5 engineers; owned technical strategy, critical architectural roadmaps, sprint alignments, and delivery execution across 20+ production codebases.
- Authored 40+ comprehensive technical specifications (RFCs/ADRs), system proposals, integration overviews, and engineering operating model charters, translating complex distributed workflows into firm organizational and stakeholder alignment.
- Maintained an exceptional individual contributor output, delivering over 370+ high-impact pull requests merged into production over a 4-year tenure on systems handling 10,000+ transactions/hour.
- Optimized high-throughput workflows by architecting intelligent caching strategies paired with comprehensive Sidekiq background job orchestration.
- Pioneered AI-augmented development ecosystems, actively implementing and coordinating Codex, GitHub MCP, and Atlassian MCP integrations into engineering workflows.
- Spearheaded a zero-downtime platform-wide migration from Elasticsearch to OpenSearch across the primary core API codebase without interrupting revenue-critical transactional velocity.
- Architected a robust Auth0-powered federated identity management layer to secure user lifecycles scale-wide across the organization's platform ecosystem.
- Elevated core test coverage metrics from 55% to 80% by introducing AI-assisted edge case discovery, directly causing a sharp decline in production incident rates.
- Built analytics integrations with Databricks and ThoughtSpot, enabling real-time executive dashboards and data-driven product decisions.

Envato | Ruby on Rails Developer (Nov 2021 – Mar 2022) | Remote

- Optimized and stabilized business-critical monetization and backend billing architectures for a major global creative marketplace serving millions of concurrent active users.

3Pillar Global | Lead Software Engineer (Sep 2020 – Oct 2021) | Remote

- Architected and implemented a comprehensive end-to-end Internationalization (i18n) framework across backend, frontend, and 3rd party ecosystems, successfully accelerating expansion into new global territories.
- Modernized legacy monolith architectures by enforcing structured Domain-Driven Design (DDD) principles, Service Objects, and expanding comprehensive automated test coverage via RSpec.
- Defined strict RESTful API blueprints and integrated high-velocity Go microservices to handle computational, latency-sensitive distributed processes.

United Virtualities (UV) | Lead Software Engineer (Aug 2019 – Aug 2020) | Remote

- Oversaw full-lifecycle technical delivery of complex client applications, driving architectural roadmaps from discovery phases up to AWS production cloud rollouts utilizing Ruby on Rails and Next.js.

- Managed multi-stakeholder expectations, budget forecasting, and scoping constraints across multiple parallel engineering workstreams.

Reservamos.mx | *Tech Lead B2B* (Aug 2018 – Aug 2019) | Hybrid

- Guided a cross-functional team of software engineers and UI/UX product designers building a highly scalable, white-label transactional booking engine for large enterprise B2B corporate partners. Managed resource allocation and systemic feature planning.

MagmaLabs | *Senior Engineering Manager / Lead Engineer* (Feb 2016 – Aug 2018) | Remote

- Advanced through three successive technical leadership tiers over 2.5 years, tracking all company-wide e-commerce projects, coordinating Engineering Managers, and acting as primary engineering liaison for high-value client proposals.
- Conducted developer recruitment, ran regular 1:1s, and designed formal progressive career paths for engineers across multiple concurrent client workstreams.
- Leveraged deep subject-matter expertise in Spree/Solidus ecosystems to construct bespoke checkout workflows, advanced subscription models, and complex international gateway integrations.

Nebula Ideas | *Backend Developer & Technical Advisor* (Dec 2010 – Jan 2016) | México

- Designed highly dynamic content management platforms, robust e-commerce solutions, and high-traction MVPs for early-stage startups utilizing Ruby and Python ecosystems, acting as a trusted technical advisor during initial product definition phases.

** Earlier professional experience from 2006 includes foundational positions in full-stack software development and unix system administration.*

EDUCATION & CREDENTIALS

-
- **Master of Information Technology** – UNIVER Plantel León (2004 – 2006)
 - **B.S. in Information Technology** – UNIVER León (2002 – 2005)
 - **Advanced AI Credentials:** Building Agentic AI Systems & AI Agents in LangGraph (DeepLearning.AI) | Generative AI Fundamentals (Databricks Academy) | AI Fundamentals (DataCamp, May 2026)
 - **Leadership & Strategy:** Advanced Product Management: Vision, Strategy & Metrics (LinkedIn Learning)
 - **Professional Proficiency:** C1 Advanced English Proficiency & Clean Code Excellence (TestGorilla) | Enterprise Linux/Unix Systems Administration (University of Illinois Urbana-Champaign)
