

ISMAEL G. MARÍN CABRERA

Staff Software Engineer · AI Engineer · MCP Specialist
León, Gto., México · ismael.marin@gmail.com · (+52) 477-792-9000 · [LinkedIn](#) · [GitHub](#) · [Medium](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Strategic, business-aligned Staff Software Engineer and AI Engineer with 20 years of expertise designing, modernizing, and scaling high-throughput distributed backend architectures across 20+ production codebases for US and LATAM markets. Pioneer in operationalizing agentic AI infrastructure and AI-augmented development workflows, specializing in Model Context Protocol (MCP) server design and high-fidelity empirical evaluation loops. Proven track record in Fintech, E-Commerce, and enterprise SaaS environments, combining deep technical execution in Ruby, Rust, and Python with a continuous learning mindset to deliver revenue-critical systems on time and with the highest quality.

TECHNICAL SKILLS

Backend & Languages	Ruby, Ruby on Rails, Python, SQL, JavaScript, Rust, Sidekiq, Redis, Intelligent Caching
AI Engineering	MCP Server Design, LLM APIs, Isolated Sandboxing, High-Fidelity Benchmarking, Claude Code, Cursor, Gemini, Codex, MCP, Github Actions
Architecture	Domain-Driven Design (DDD), Service-Oriented Architecture (SOA), TDD, Distributed Workflows, Transactional State Machines, Clean Architecture, Service Objects
Infrastructure	AWS, Docker, CircleCI, Heroku, MySQL, PostgreSQL, OpenSearch, Elasticsearch, Databricks, ThoughtSpot

OPEN SOURCE INNOVATIONS

Tools

[agent-mcp-runtime](#) · *Author & Maintainer*

High-performance agentic runtime framework built in safe Rust, enabling LLMs to execute complex ReAct patterns and communicate with external services over the Model Context Protocol (MCP).

[rails-ai-bridge](#) · *Author & Maintainer (+1,800 downloads)*

Zero-configuration MCP server providing instant, read-only system tools and structured Rails application context to AI assistants. Improves agent response speed by up to 40% and reduces token overhead by ~15%.

[ruby-skill-bench](#) · *Author & Maintainer*

Empirical evaluation framework for benchmarking AI agent skills using isolated Git sandboxes and multi-dimensional LLM blind judging to eliminate regressions in production agentic workflows.

Skills

All repositories independently validated — [tessl.io](#) evaluation scores >93%

[rails-agent-skills](#) / [ruby-core-skills](#) / [hanakai-yaku](#) / [agnostic-planning-skills](#) · *Author & Maintainer*

Expert skill libraries encoding decades of production-grade Ruby on Rails best practices into modular AI skills enforcing TDD discipline, DDD architecture boundaries, and workflow chaining gates. Compatible with Claude Code, Cursor, and Gemini.

PROFESSIONAL EXPERIENCE

Dealerware · Software Technical Lead *May 2022 – April 2026 | Remote*

- ▶ Spearheaded a platform-wide Elasticsearch → OpenSearch migration with zero downtime across the primary API codebase, maintaining uninterrupted transactional velocity on systems handling 10,000+ daily transactions.
- ▶ Grew core system test coverage from 55% to 80% by introducing AI-assisted edge case discovery and engineering-wide testing best practices, resulting in a sharp decline in production incident rates.
- ▶ Authored 40+ RFCs/ADRs and led a squad of 4–5 engineers while remaining hands-on with 370+ merged pull requests, pioneering AI-augmented workflows incorporating Codex, GitHub MCP, and Atlassian MCP.

Envato · Ruby on Rails Developer *Nov 2021 – Mar 2022 | Remote*

- ▶ Optimized and stabilized business-critical monetization and backend billing architectures for a global creative marketplace serving millions of concurrent active users.

3Pillar Global · Lead Software Engineer *Sep 2020 – Oct 2021 | Remote*

- ▶ Designed and implemented a comprehensive end-to-end i18n framework across backend, frontend, and third-party ecosystems, accelerating successful expansion into new international markets.
- ▶ Improved high-load endpoint response times by defining strict RESTful API contracts and integrating Go micro-services for performance-critical distributed processes.
- ▶ Modernized legacy Rails monolith by enforcing DDD principles, Service Objects, and RSpec coverage to ensure long-term codebase maintainability.

United Virtualities (UV) · Lead Software Engineer *Aug 2019 – Aug 2020 | Remote*

- ▶ Oversaw full-lifecycle technical delivery of complex client applications, driving architectural roadmaps from discovery through AWS production rollouts using Ruby on Rails and Next.js.

Reservamos.mx · Tech Lead B2B *Aug 2018 – Aug 2019 | Hybrid*

- ▶ Guided a cross-functional team of engineers and designers building a scalable white-label transactional booking engine embedded by large enterprise B2B corporate partners.

MagmaLabs · Senior Engineering Manager / Lead Engineer *Feb 2016 – Aug 2018 | Remote*

- ▶ Advanced through three successive leadership tiers over 2.5 years, tracking all company-wide e-commerce projects, conducting recruitment, and defining progressive career paths for engineers.
- ▶ Built bespoke checkout workflows, subscription models, and international gateway integrations leveraging deep Spree and Solidus expertise.

Nebula Ideas & The Hybrid Group · Backend Developer & Technical Advisor *Dec 2010 – Jan 2016 | Remote*

- ▶ Designed content management platforms, e-commerce solutions, and high-traction MVPs for early-stage startups using Ruby and Python ecosystems.
- ▶ Contributed to The Hybrid Group (2013–2014) on Artoo (Ruby IoT/robotics framework) and maintained the KanbanPad platform.

EDUCATION & CREDENTIALS

Master of Information Technology — ITESO Universidad Jesuita de Guadalajara (2004–2006)

B.S. in Information Technology — UNIVER Plantel León (2002–2005)

Advanced AI Credentials: Building Agentic AI Systems & AI Agents in LangGraph (DeepLearning.AI) · Generative AI Fundamentals (Databricks Academy) · AI Fundamentals (DataCamp, May 2026)

Professional Proficiency: C1 Advanced English (TestGorilla) · Clean Code Excellence (TestGorilla) · Enterprise Linux/Unix Systems Administration (University of Illinois Urbana-Champaign)
